

The Cube Inside Planet Earth

True Model written by Rudolf Bošnjak

1. Abstract

This paper presents the hypothesis that planet Earth inner core is not composed of molten metal, as widely accepted in geo science, but instead consists of a cube spacecraft constructed by an unknown civilization. The cube is hypothesized to regulate planetary stability, produce magnetic fields, and making seismic phenomena-earthquakes, when change direction of travel through space in cold vaccum. Cube have a system of 6-six energy openings and protective Vajra spherical layer. The model situates planet Earth within a cosmic network of technologically engineered planets.

2. Introduction

Conventional Earth sciences describe the planet core as a dense iron-nickel sphere generating a magnetic field through convection and dynamo processes (Buffett, 2000). In contrast, the Cube Hypothesis proposes that planet Earth is fundamentally an engineered construction, centered around a cube spacecraft enclosed within a spherical Vajra Black protective sphere system. This alternative view seeks to integrate real knowledge about this cube shape into a unified interpretive framework.

3. Methodology

The development of this hypothesis relies on three interpretive approaches:

3.1 Symbolic Interpretation:

Geometric symbolism, including mandala as is analyzed as a reflection of

engineering principles. The cube and sphere are treated as forms representing stability and protection.

3.2 Comparative Cosmology:

Planetary formation is interpreted as a universal process in which cubes serve as space craft, gradually accumulating material layers during travel through vacuum.

3.3 Theoretical Extrapolation:

Planetary stratification (core, mantle, crust) is reconsidered as technological layers generated by the cube and its surrounding Vajra Black Sphere.

4. Results

The core components of the hypothesis include:

4.1 Cube Geometry:

The planetary core is hypothesized to contain a perfectly proportioned cube spacecraft with internal architecture and energy systems.

4.2 Energy Opening:

Each of the cube six sides incorporates a circular opening hole, functioning as an inlet or outlet for unknown cosmic energies. These energies maintain planetary rotation, produce magnetic field as Schumann resonance, and all possible balance.

4.3 Protective Sphere (Vajra Black Sphere):

Enclosing the cube is a black spherical system functioning as an electric arc furnace. This system melts surrounding material, forming the molten layer (mantle) observed by geo science.

4.4 Stratification of Earth: The structural layers, according to this model, are as follows:

1 Vajra Black Sphere,

2 Atmospheric cavity is core planet Earth, as solid crust and atmosphere

3. Molten lava layer (mantle).

4.5 Seismic Function:

Earthquakes and volcanic activity are interpreted as the result of translational cube movements in 6-six possible directions, up, down, left, right, forward, reverse.

5. Discussion

5.1 Geophysical Implications:

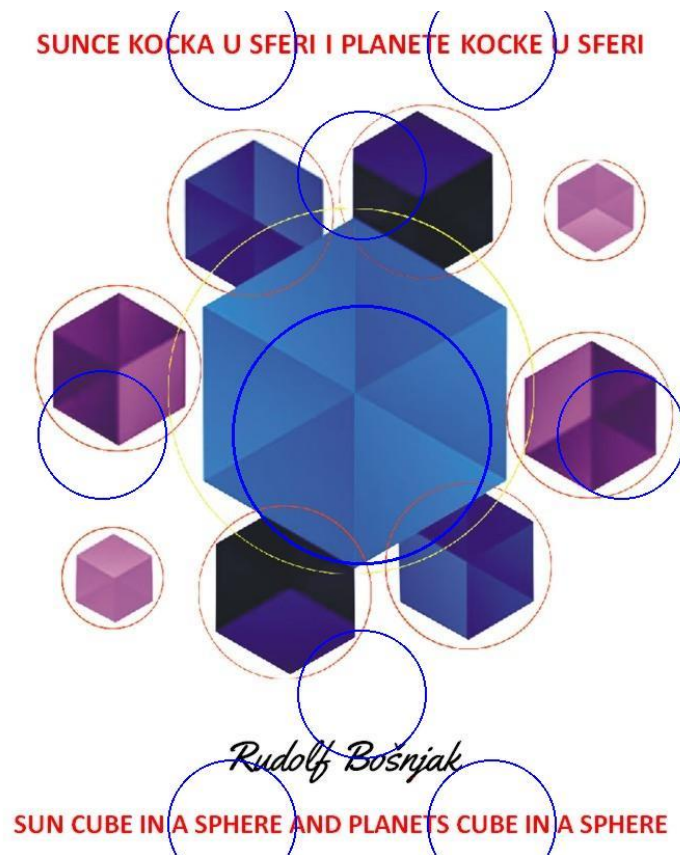

This hypothesis challenges mainstream models by replacing natural dynamo theory which is false explanation as it is just a scientists assumption that the core is hot. It proposes that magnetic fields and seismic events, as tectonic plate movement are not emergent natural phenomena, but uncontrolled technological processes from the cube when move, up, down, left, right, forward, reverse.

5.2 Civilizational Context:

The cube is attributed to an unknown, advanced civilization, who living inside cube, whose technologies and possible subterranean structures remain hidden. Guardian beings are speculated to operate the system, ensuring planetary stability.

5.3 Cosmic Network of Cubes:

The model suggests that Earth is not unique, but part of a larger cosmic system in which planetary bodies are generated by similar cubic spacecraft enveloped in spherical shells as below image show.

Cosmic network of technologically engineered planets.

6. Conclusion

The Cube Inside planet Earth Hypothesis redefines Earth as a planetary spacecraft centered on a cube technological construction.

While speculative and unrecognized in mainstream science, it provides a coherent alternative model linking geology, cosmology, and symbolism. Acceptance of this framework would transform human understanding of planetary origins and situate Earth within a broader cosmic architecture of engineered worlds.
